

Summer Fellowship Programme

Objective:

To provide undergraduate pharmacy students with hands-on exposure to pharmaceutical research, develop scientific temperament, and train them in the use of sophisticated laboratory instruments and modern research methodologies.

Outcomes:

The programme enabled students to work on real research problems under faculty mentorship, enhancing their technical competence, analytical thinking, and problem-solving skills. A total of **12 undergraduate students** successfully completed the **15-day fellowship**, gaining practical research experience and exposure to advanced instrumentation. The programme also strengthened research orientation and interpersonal skills among the participants.

Innovative Idea Box

Objective:

To promote innovation, creativity, and entrepreneurial thinking among students by providing a platform to present innovative ideas, prototypes, and solutions addressing real-world healthcare and pharmaceutical challenges.

Outcomes:

The initiative encouraged interdisciplinary collaboration and innovation culture among students. The event witnessed active participation of **126 students**, presenting **27 prototypes and 15 innovative ideas**, followed by mentoring sessions, innovation expo, and idea-pitching rounds evaluated by experts. The activity motivated students to transform ideas into potential research projects, start-ups, and technology-driven solutions.
